Dr Christopher Chen delivers Plenary Lecture at the World Congress of Neurology on the impact of vascular disease on cognitive impairment

- The 21st World Congress of Neurology was held in Vienna from 21st - 26th September 2013. Under the theme of "Neurology in the Age of Globalisation", it was attended by over 6000 delegates.
- The rich scientific programme focused on the latest developments in clinical practice and research through teaching courses, workshops, lectures and distinguished plenary speakers, including Dr Christopher Chen, who spoke on advances in the diagnosis, epidemiology, neuroimaging and prevention strategies for Vascular Cognitive Impairment - which is one of the main research themes for the Memory Aging and Cognition Centre.
