

Syifaa was one year old when she was diagnosed with Nemaline Myopathy and Gastroesophageal Reflux in 2015. She experiences multiple comorbidities such as muscle weakness and feeding problems.

Despite her family's best efforts, the frequent check-ups and various breathing and feeding equipment needed to keep her well have been taking a toll on their finances.

Grateful for the support, Syifaa's dad said, "I am the sole breadwinner, so the funding has helped us a lot. Ever since the diagnosis, she has been receiving support for her medical equipment and other essential items like the gauze and catheter. Thank you!"
